

COCTIO CONVEOYRS

FUNCTION

Move animal bone residue and other ingredients to desired locations.

KEY BENEFITS

1. Transports and feeds the residue of the bone residue to the next desired process, such as bone drying process.

PRODUCTION

The residue of the ingredients used in the cooking process are moved to the next process or desired storage tank via the conveyors. The screw conveyors are equipped with centrally located axles, which means that larger bones do not clog the conveyor.

Cleaning: Coctio conveyors can be connected to the CIP system, which means that the internal parts of the conveyor are cleaned automatically with CIP. The external parts are washed manually.

COCTIO CONVEOYRS

EQUIPMENT SIZE

Height (mm)	As required
Length (mm)	As required
Width (mm)	As requirer
Weight (kg)	As required

COMPONENT DESCRIPTION

Screw conveyor	✓
